

Job Title: Content Leads (12)

Project: Electrifying the Future, Goodman School of Mines, Laurentian University in partnership with MIRARCO Mining

Project Description:

The "Electrifying the Future Project" is a bilingual (English/French) project that aims to bring awareness to students about post-secondary programs that lead to jobs and services across the electric vehicle supply chain from mineral exploration all the way to the automotive and mobility industry. In its first phase, a rigorous marketing campaign will help to change perspectives and bring awareness to a variety of career options in this industry.

Two in-person events will provide elementary, high school and postsecondary students exciting and interactive experiences. First, high school students from around Northern Ontario will compete in "MineOpportunity: the automotive and mobility edition" (June 7 & 8, 2023). In this game, students work together to become the "wealthiest" team by successfully answering questions, completing challenges and activities about technology, engineering, geosciences, the environment, careers, corporate social responsibility and the automotive and mobility industry.

Second, two weeks of free summer day camps from July 17-21 and July 31-August 4th, 2023 will be offered for students in grades 6-9. STEM and non-STEM lessons and activities will be delivered at three locations (Laurentian University, Cambrian College and College Boreal), along with a one-day field trip to 3 local businesses (Epiroc, Technica Mining, and Laurentian Chrysler).

The "Electrifying the Future" program will inspire coming generations to get involved in the industry by stimulating interest in career choices. It will also raise awareness of emerging trends of innovation and technology in the industry, and the importance of critical minerals. The resulting experiences will appeal to and meet the needs of diverse audiences, including Indigenous people, youth, women and other underrepresented groups.

Job Description:

Content leads will work with site directors to develop, demonstrate and lead activities in your area of knowledge for the Electrifying the Future Program. Training and resources to help you successfully complete your duties will be provided.
